

Glaziers

Glazier Training

In accordance with the Health and Safety legislation, the employer must ensure, so far as is reasonably practicable, that employees receive “such information, instruction, training and supervision as is necessary to ensure” their health and safety at work.

It is therefore essential that glaziers are given sufficient training and information on the equipment and products specifically used to ensure they work safely and efficiently.

Qualifications

Companies should also support Glaziers in gaining a nationally recognised qualification as it is possible that only those qualified to the national standard will meet the future requirements of the industry.

To be assessed as competent you should hold or be working towards your Level 3 NVQ Qualification in Glazing or Fenestration.

This is the qualifications recognised by your industry and are based on National Occupational Standards.

Many construction firms and their clients already insist that workers hold these qualifications.

Cleaning Up (House Keeping)

Glaziers should be trained to clean all areas where they have worked, as it is inevitable that some dust and mess will have been created which can cause tripping or health hazards.

Associations or Training Forums

The National Federation of Glaziers

The aim of the association is to promote professionalism and technical standards in the industry.

The Glass and Glazing Federation

The GGF exists to promote its members, industry best practice and helps set the highest technical standards in Glass.

Qualification assessment methods

Qualifications are available at Level 2 & 3 and usually take 3 - 5 months to complete from induction to completing the qualification.

Further information on qualifications can be obtained from the Sector skills council Proskills or the Glass Qualifications Authority.

Other Recommended Training

The following is a list of possible training that you may need depending on your specific area of work. The list is not exhaustive or definitive.

Glaziers may require other training throughout their career, such as: Induction training, scaffolding awareness, specific product training, working at heights, ladders, fall arrest, power & hand tools, confined spaces, goods hoist, mobile towers, harnesses, health and hygiene, manual handling - lifting & handling manual loads, slinging loads, fire prevention, site security, working with the public, first aid, fire extinguishers, defensive driving, refresher training.

Does a registration card exist for this occupation

Yes, a Blue card is available at Level 2 and Gold card for Level 3.

As well as the qualification many construction firms and their clients already insist that workers hold a relevant registration card. The CSR (Construction Skills Register) or an affiliated scheme such as the CSCS (Construction Skills Certification Scheme) would appear to be the most widely held cards however other schemes may be available and it will in most cases be the client, main contractor or sub-contractor that determines if a card is required and what the preference is.

To receive a card, you must hold an NVQ/SVQ or acceptable equivalent and pass a health and safety assessment or training.

What does CITB NI do for this sector

CITB provide grant assistance for employers that send employees on training courses please see our grant section at the above website

A Health & Safety advice booklet for Glaziers has been developed and is available to view within the publications section of our website.

A Health & Safety Training Blueprint has been developed and is also available to view within the publications section of our website.

The QEW (Qualifying the Existing Workforce) is a fully funded programme that has been running for the last three years. Over 1500 candidates have now benefited from this programme and have gained a regulated NVQ Level 2 qualification for the first time.

Other specifically funded programmes are also available as required and CITB NI has or will be funding programmes for Demolition, Piling, Core Diamond Drilling, Asbestos Awareness, Insulation Installer, Horizontal Directional Drilling and Scaffolding.

For further advice please view the Health & Safety advice booklet for Glaziers that has been developed and is available to view within the publications section of our website www.citbni.org.uk
